

CRA II or Senior CRA

CNS is a uniquely integrated service group that goes significantly beyond the traditional CRO service, focused on broader and deeper product development. It integrates BioDesk, an intelligent global product development and regulatory affairs consultancy, with our committed, highly experienced Australian/New Zealand clinical operations and biometrics teams.

We are headquartered in Brisbane, Australia with our team also located throughout Australia, New Zealand, the UK and the USA (Washington DC). In 2015 we were voted as the **Australian Favourite CRO** by ARCS members (as well as other third parties).

Due to continued success, we are looking for an experienced CRA II /Senior CRA to join our expanding team.

Responsibilities will include:

- Contribute to study feasibility activities and complete regulatory and ethics committee applications
- Support site start up activities through collection of essential documents for the TMF, collation and review of site activation package, drafting of site training material and provide input to study plans and documents
- Conduct site monitoring visits according to contract requirements, maintain adequate study supplies, ensure accurate maintenance of the trial master file.
- Develop recruitment strategies with the study team and implement at site
- Management of site close out activities in conjunction with the study team.

Experience

- Degree in life sciences, biomedical sciences, nursing or pharmacy preferred
- At least 2 years' experience as a CRA ideally within early phase development
- A full driving license and willingness to travel including occasional interstate travel
- Fluency in English and excellent verbal and written communication skills are essential
- Adaptability, team work and collaboration are essential

So what's in it for you?

- Regionally based monitoring roles significantly reducing the requirements for interstate travel
- Rapidly growing, successful company creating ongoing opportunities for career development
- A strong values based organisation with a unique value proposition and high levels of staff engagement
- International client base of cutting edge biotechnology companies at the forefront of scientific research.

Only applicants who are eligible to work in Australia will be considered.

No agencies have been engaged on this role and only direct applicants will be considered.
